

WOODEN COTTAGES

sustainable scandinavian design

WOODEN COTTAGES

Wooden Cottages provides building kits for typical Scandinavian timber frame cottages from 9 m² to 90 m².

sustainable

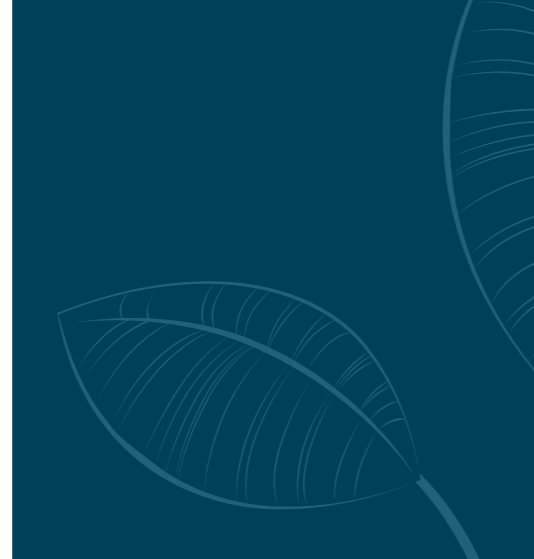

The houses are made of wood from sustainably managed forests in Northern Sweden. The forest area in Sweden increases every year. Compared to building in stone and cement, building in wood saves up to 90% in CO2 emissions.

scandinavian

The houses are made for Scandinavian conditions and offer a warm and comfortable climate even during winter. The windows have double or triple glazing. To create a Scandinavian look inside, you can choose our solid pine floor and wooden panelling.

design

Our building kits offer great flexibility in design. You decide where you want your doors and windows. Houses can be extended with a loft and a porch. All houses are available with a gable roof or a shed roof.

APPLICATIONS

Wooden cottages are suitable for every application where space is needed and a natural look desired.

Business applications

- recreation
- office
- therapy room
- childcare centre
- classroom
